## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/GB 03/02525

1	Ba	sis	of	the	rei	oort
---	----	-----	----	-----	-----	------

1. With regard to the **elements** of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)):

	Des	scription, Pages	
	1-2	2	as originally filed
	Cla	ims, Numbers	
	1-3	1	filed with telefax on 12.07.2004
	Dra	wings, Sheets	
	1/4-	4/4	as originally filed
2.	Witl lang	h regard to the <b>lang</b> u guage in which the in	rage, all the elements marked above were available or furnished to this Authority in the ternational application was filed, unless otherwise indicated under this item.
	The	ese elements were av	vailable or furnished to this Authority in the following language: , which is:
		the language of a tra	anslation furnished for the purposes of the international search (under Rule 23.1(b)).
		the language of pub	lication of the international application (under Rule 48.3(b)).
		the language of a tra	anslation furnished for the purposes of international preliminary examination (under 3).
3.	Witl inte	h regard to any <b>nucle</b> rnational preliminary	eotide and/or amino acid sequence disclosed in the international application, the examination was carried out on the basis of the sequence listing:
		contained in the inte	rnational application in written form.
		filed together with th	e international application in computer readable form.
		furnished subsequer	ntly to this Authority in written form.
		furnished subsequer	ntly to this Authority in computer readable form.
		The statement that t in the international a	he subsequently furnished written sequence listing does not go beyond the disclosure application as filed has been furnished.
		The statement that t listing has been furn	he information recorded in computer readable form is identical to the written sequence ished.
١.	The	amendments have r	esulted in the cancellation of:
		the description,	pages:
		the claims,	Nos.:
		the drawings,	sheets:

### INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/GB 03/02525

This report has been established as if (some of) the amendments had not been made, since they have
been considered to go beyond the disclosure as filed (Rule 70.2(c)).

(Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.)

6. Additional observations, if necessary:

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

# INTERNATIONAL PRELIMINARY International application No. PCT/GB 03/02525 EXAMINATION REPORT - SEPARATE SHEET

According to the wording of independent claim 1, a floor mat with a tufted pile textile surface and an elastomer backing is to be made by mixing elastomer crumbs and a binder, depositing the crumb/binder mixture in a layer, placing a textile surface element that includes tufts of yarn on the elastomer layer and pressing the assembly thus obtained in a heated press having an inflatable diaphragm.

According to the applicants' submissions in the proceedings under Chapter II PCT, "a heated press with an inflated diaphragm is used to press the mat assembly, this type of press being much gentler than flat plate presses or press collers, so helping to avoid flattening of the tufted pile fabric" and "as a result, the pile of the textile surface is not flattened and the mat as it emerges from the press has a good dust retention performance and is commercially acceptable for sale in its manufactured state".

No disclosure can be found in the documents cited in the search report of a method of making a floor mat as defined in independent claim 1, let alone any technical information which might have made foreseeable the technical success said to have been achieved.

#### Claims

- 1. A method of making a floor mat with a tuffed pile textile surface and an elastomer backing, the method including mixing elastomer crumbs and a binder, depositing the crumb/binder mixture in a layer, placing a textile surface element that includes tufts of yarn tufted into a tufting substrate on the layer to form a mat assembly, and pressing the mat assembly in a heated press having an inflatable diaphragm while setting the binder, so that the elastomer crumbs are consolidated to form an elastomer backing that includes volds between the elastomer crumbs, and the textile surface element is bonded to the elastomer backing, wherein the mat assembly is pressed at a pressure in the range 2-8 psig (14-55 kPa) and at a maximum temperature of up to 200°C, to form a backing with a density in the range 0.5 to 0.9g /cm³.
- A method according to claim 1, wherein the mat assembly is pressed such that the
  thickness of the elastomer backing is in the range 60-100%, preferably 65-80%, of the
  thickness of the unpressed crumb/binder layer.
- A method according to any one of the preceding claims, wherein the mat assembly is
  pressed at a maximum temperature in the range 110°C to 140°C, and most preferably
  approximately 125°C.
- A method according to any one of the preceding claims, wherein the mat assembly is
  pressed in a plurality of stages including a low temperature stage and a higher temperature
  stage.
- 5. A method according to claim 4, wherein the binder is selected from the group comprising thermosetting and water curable polymeric materials and mixtures thereof, and the mat assembly is pressed in a plurality of stages including at least one low temperature stage followed by at least one higher temperature stage.
- 6. A method according to claim 4, wherein the binder is selected from the group comprising thermoplastic polymeric materials, hot melt binders and mixtures thereof, and the mat assembly is pressed in a plurality of stages including at least one high temperature stage followed by at least one lower temperature stage.
- A method according to any preceding claim, wherein the press includes a plurality of zones, including a low temperature zone and a higher temperature zone.

S-P550569PC\_2

12/07/2004

- 8. A method according to claim 7, wherein the mat assembly is transported through the press in a plurality of steps, so that it is pressed sequentially in each of the plurality of zones.
- 9. A method according to any one of the preceding claims, wherein the mat assembly is transported through the press on a conveyor.
- 10. A method according to claim 9, wherein the crumb/binder mixture is deposited on the conveyor using a spreader device that moves at a constant speed relative to the conveyor.
- A method according to claim 10, wherein the spreader device includes a vibrating doctor blade.
- 12. A method according to any one of the preceding claims, wherein a continuous textile element is laid on the crumb/binder layer.
- 13. A method according to any one of claims 1 to 11, wherein separate textile elements are laid consecutively on the crumb/binder layer.
- 14. A method according to any one of the preceding claims, wherein mat borders are produced by spreading the crumb/binder mixture over a larger area than the textile element or elements.
- 15. A method according to any one of the preceding claims, wherein the elastomer crumb is crumbed vulcanised rubber, preferably nitrile rubber.
- 16. A method according to any preceding claim, wherein that the elastomer backing has a bulk density in the range 45 to 70%, preferably 55 to 70%, of the solid density of the elastomer crumb material.
- A method according to any preceding claim, wherein the backing has a density in the range 0.7 to 0.9g /cm³.
- A method according to any preceding claim in which the backing has a thickness of at least
   1 mm.
- 19. A method according to any preceding claim in which the crumb size is less than 5 mm diameter and is preferably substantially in the range 2 to 4 mm.
- 20. A method according to any preceding claim in which the crumb/binder mixture includes at least 10% by weight powdered elastomer crumb.
- 21. A method according to any preceding claim in which the crumb/binder mixture includes from 2 to 20% by weight of binder.

S-P550569PC 2

12/07/2004

UDL MILTON KEY

- 22. A method according to claim 21, in which the crumb/binder mixture includes less than 1% by weight powdered elastomer crumb and from 2 to 12% of binder.
- 23. A method according to claim 22, wherein the crumb/binder mixture includes at least 10% by weight powdered elastomer crumb and from 9 to 20%, preferably about 14%, of binder.
- 24. A method according to any preceding claim in which the binder is a polyurethane MDI binder.
- 25. A method according to claim 24 in which the binder is selected from the group consisting of 4,4-methylene di-p-phenylene isocyanate (MDI) polyurethane one- and two-component adhesives.
- 26. A method according to claim 24 in which the binder is a solvent free one component polyurethane adhesive.
- 27. A method according to any one of claims 1 to 23 in which the binder is a hot melt binder.
- 28. A method according to any preceding claim in which the crumb/binder mixture includes powdered additives selected from the group consisting of anti-microbial additives, antiflammability additives, pigments, such as iron oxide, and anti-static additives, such as carbon fibres.
- 29. A method according to any preceding claim, characterised in that the textile surface comprises a knitted, woven or non-woven textile.
- 30. A method according to any preceding claim, wherein an edging strip is bonded to the elastomer backing adjacent at least one edge thereof.
- 31. A method according to claim 30, wherein the textile surface element partially overlaps and is bonded to the edging strip.
